## Semi-Automatic Winder W8-910

The Semi-Automatic Winder W8-910 continues a tradition of high quality and low maintenance machines. The W8-910 is preferably used for winding of high tensile and soft steel wires as well as copper wires with diameters of 0,3 mm and more, mostly in combination with driven or passive unrolling payoffs for highest winding quality and winding speed. The winder ensures a high operator friendly process and meets highest demands in security standards.

Wide open winding area allows easy operator access

# Complete Braiding & Winding Solutions

### Application

- High-speed winding for Copper and Steel wires
- For use of wide variety of bobbins (max. flange dia. 125 mm and width 250 mm)

### Configuration

- 1 spindle arrangement
- Capstan disc with 250 mm diameter
- Siemens Operator control

### Options

- Wire break sensor

### Technical Features

- Set variable winding pitch and traverse limits from operator panel
- Constant spindle speed or constant linear speed
- Servo motor traverse
- Multi-language display
- Small footprint
- CE compliant

### Model

W8-910

Speed (rpm)

250 - 2900

Bobbin Dimensions (ODxOAW)

125 x 250 mm

Power Supply

220 V AC

Material to be wound

Steel and Copper wires

Jog speed

50 rpm

Line speed

max. 300 m/min

Traverse

adjustable up to 2,5 mm

Motor

2.2 kW

Weight

300 kg

Floor Space (mm)

1000 x 1030 x 1290
